Date of Birth: April 27, 2004

PROFESSIONAL SUMMARY

Results-driven Cloud Engineer and Full-Stack Developer with a proven track record in architecting scalable cloud infrastructure and robust web applications. Adept at seamlessly integrating advanced AI/ML models into comprehensive system architectures. Seeking to leverage analytical expertise and technical proficiency to engineer resilient, high-impact solutions in a dynamic technological environment.

EXPERIENCE

Cloud Engineer - Jelecom

07/2025 – 08/2025

- Provisioned and orchestrated Azure Virtual Machines (VMs) with optimal networking and storage configurations.
- Configured Virtual Networks (VNETs), NSGs, and Azure File Share to establish a highly resilient and secure cloud infrastructure.
- Deployed and fortified web applications on Azure, strictly adhering to cloud best practices for resource optimization and security.

Contestant - Egyptian Collegiate Programming Contest

07/2025

- Solved complex algorithmic and data structure challenges under strict time constraints.
- Demonstrated exceptional problem-solving capabilities, strategic analytical thinking, and effective cross-functional teamwork.

Full-Stack Developer - Arab African International Bank

08/2024

- Spearheaded the development of scalable user and merchant portal systems utilizing Node.js, Express.js, and React.js.
- Architected robust APIs and database schemas, achieving seamless front-end UI integration and optimized data flow.

PROJECTS

Intelligent Interview Simulation System (IISS) | Graduation Project

- Architected and engineered a comprehensive AI-driven interview simulation platform deployed across Web, Mobile, and Desktop environments.
- Designed a scalable full-stack architecture leveraging Flutter, Node.js, Express.js, and MongoDB.

- Seamlessly integrated sophisticated AI modules for real-time facial emotion detection, eye tracking, tone analysis, and speech processing.
- Orchestrated recruiter and candidate workflows, featuring automated AI-generated feedback and detailed performance analytics.

Airline Tweet Sentiment Analysis & Deployment

- Engineered a highly accurate sentiment analysis pipeline utilizing advanced Natural Language Processing (NLP) techniques.
- Executed precise feature extraction leveraging TF-IDF algorithms (5,000 features) to train and evaluate machine learning models.
- Trained, fine-tuned, and optimized Logistic Regression and Naive Bayes models utilizing GridSearchCV for peak accuracy.
- Deployed the predictive solution via FastAPI and Streamlit to facilitate real-time data inference.

TECHNICAL SKILLS

Programming Languages:	Python, Java, C, C++, JavaScript, TypeScript
Frameworks & Technologies:	React.js, Node.js, Express.js, FastAPI, SQL Server, MongoDB
Cloud Computing & Tools:	Microsoft Azure, AWS, Git, GitHub, Postman, VS Code, Colab
Artificial Intelligence (AI/ML):	Deep Learning (CNNs, Autoencoders), NLP, Computer Vision, TensorFlow, PyTorch, Scikit-learn, OpenAI Whisper

EDUCATION

Bachelor's Degree in Computer Science - *Future University in Egypt*

2022 - 2026
